

FILTER BAGS

Bag filtration offers an effective, economic means of removing large volumes of insoluble contaminants at a high flow or high viscosity.

They are suitable for a wide range of applications including domestic water supply and industrial filtration.

Our standard filter bags are manufactured from polypropylene but we also offer a range washable of nylon mesh bags for higher micron ratings.

They are designed to fit into the polypropylene Ametek PBH housing which is similar to the large diameter filter housing, compact and simple to install.

Maximum continuous operating temperature: 37°C

Housing length: 10", 20"

Micron rating (nominal): 1, 5, 10, 25, 50, 100, 200

Micron rating for washable/reusable nylon mesh bags: 50, 100, 200, 300, 500, 800

We also offer stainless steel single or multi-bag systems for greater fluid compatibility, high temperatures or higher flow applications.
